U Use

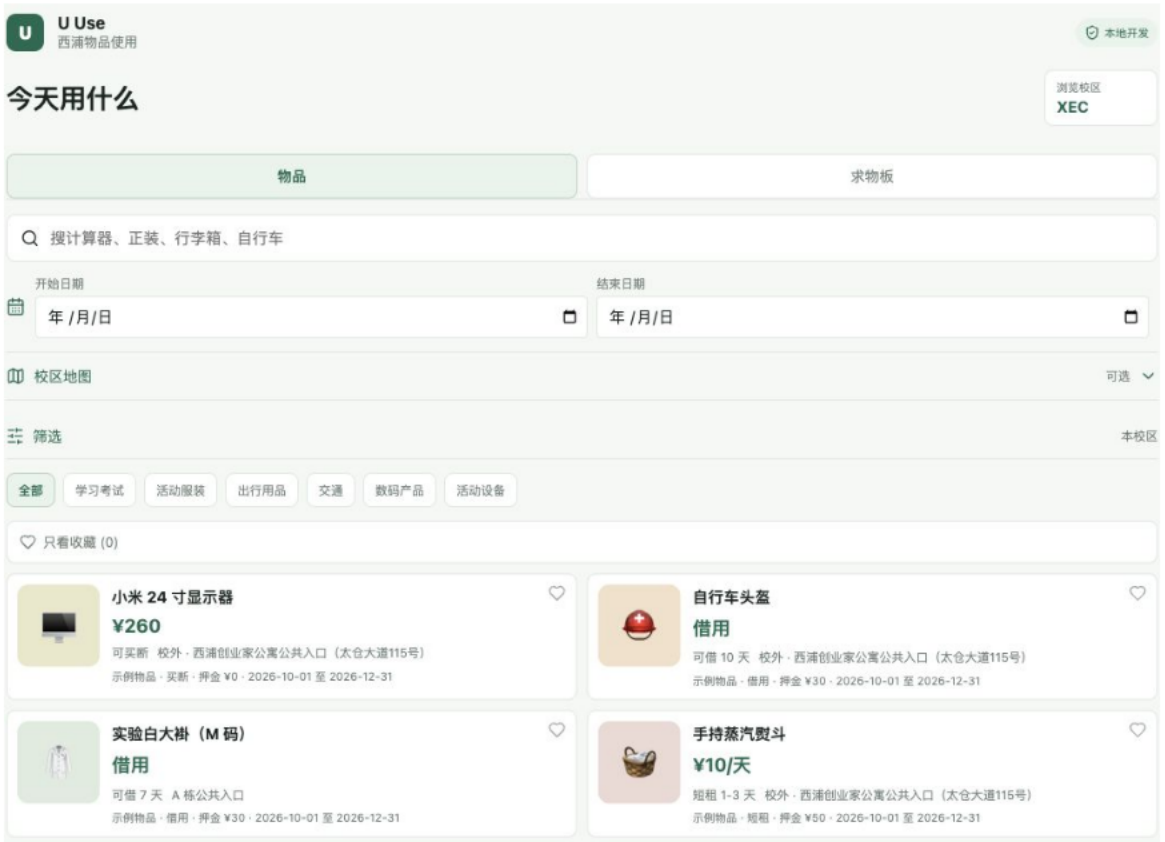

Campus item access

An item for your dates, with an agreed handoff and clear return terms.

Buy, borrow, rent or swap

Proposed pilot: eight DTS classes (~430 students)

19 October 2026

Demo inventory. Features frozen for user tests.

Student needs and target user

Needs are occasional

Friends and existing services are the starting point. U Use must make a specific task easier.

V002, V005, V008, V015

Dates need an owner's confirmation

An item listing is useful only if the owner can offer it on the requested dates.

V001, V003, V009, V012, V014

Privacy remains a choice

Students should be able to agree a public handoff without sharing live location or a full timetable.

V004, V008, V009, V013

Team-reported interview summaries, n = 15. Qualitative insights, not a representative survey.

First target users

A DTS student with a specific, planned short-term need and no suitable item available from a known peer.

The intended journey

Need and dates
Relevant offer
Agreed handoff
Confirmed return

Pilot market and alternatives

TAM context

26,000+ students

Institution-wide universe. Local demand is unmeasured.

Pilot SAM boundary

~430 students

Eight DTS classes. Team estimate, access to confirm.

SOM planning case

2 requesters served in 4 weeks

Three substitutes to compare

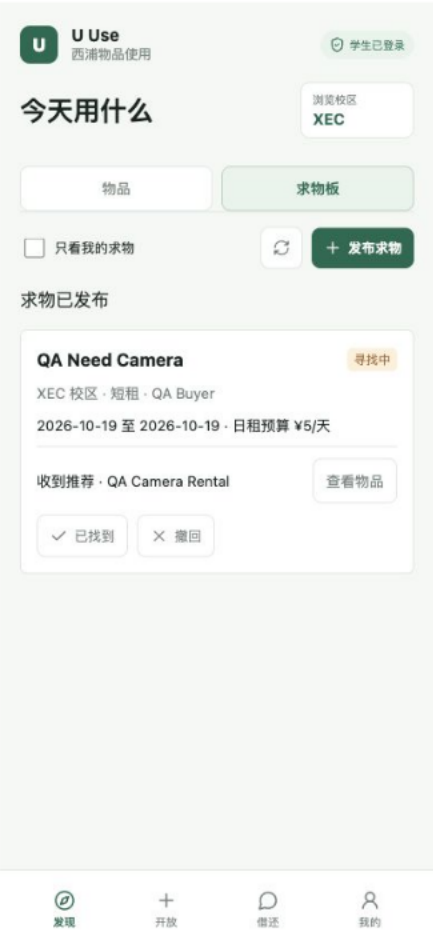

Alternative	Visible service scope
Xianyu	Broad item listings and resale
Renrenzu	Equipment rental marketplace
ATRenew	AHS trade-in and Paipai resale

Proposed advantage

Dates, explicit acceptance and local handoff, without compulsory location sharing.

S1-S4. Planning case: 80 invites × 10% posting × 25% fulfilment, subject to supply.

Product and concept choice

Individual timetables

Import an image or PDF. Review each class, then suggest mutual free slots.

Requests and offers

Post dates and budget. Owners recommend an item before any booking.

Optional location

Agree a public handoff. Maps stay collapsed.

Different operating models

Concept	Score / 5
Manual bulletin	3.60
Managed item pool	2.55
U Use peer access	3.80

Weights: scheduling 30%, operations 25%, feasibility 25%, privacy 10%, supply 10%.

Operating fallback

Low usage or supply may justify a switch to the manual bulletin.

Demo account and request. Scores are planning judgments. Full matrix and sensitivity in the workbook.

Business model and pilot economics

<table>

An item for your dates
Clear fees and return
Public handoff
Optional location</td><td>Relationships
Manual support
Explicit confirmation</td><td rowspan="2">Segments
Occasional requesters
Willing item owners
DTS pilot first</td></tr>
<tr><td>Resources
Relevant supply
Code and operators</td><td>Channels
Eight DTS classes
Permitted referrals</td></tr>
<tr><td colspan="3">Costs
CNY180 planned cash for four weeks. Team time is separate.</td><td colspan="2">Revenue
Pilot platform fee CNY0. Later fees need validation.</td></tr>
</table>

Base case: CNY20 paid GMV. A hypothetical 5% fee yields CNY1 before costs.

Planning assumptions. Deposits, free borrowing and swaps do not count as platform revenue.

Team and next milestones

Agreed responsibilities

郭宇璇 (Rita)	Code and coordination
汪睿	Analysis and presentation
毛相宜	Interviews and requirements
黄俊杰	Recruitment and personas
李元龙	User tests and statistics
黄禹轩	Data and weekly submission
汤鋆秋	Iteration and retesting

User validation and A1

Week 6: 19-25 Oct

Feature freeze. Link three insights to the persona, journey and design.

Week 7: 26 Oct-1 Nov

Review three concepts. Test each user's own timetable, fees and privacy choices.

Week 8: 2-6 Nov

Finalise the BMC, evidence and six slides. Submit by 6 Nov, 23:59 via LMO.

Demo scope ready for user tests. Live email, physical devices and production setup remain open.
