November 2026

Problem & Market Opportunity

An item is useful only if it is available when you need it.

UK study: collection/return friction matters (Hobson & O'Byrne, 2024).

Need or constraint	Evidence IDs	Design implication
Occasional needs	V002/005/008/015	Planned requests first
Owner commitment	V001/003/009/012	Dates + acceptance
Privacy and choice	V001/004/005/013	Optional GPS / import

University base

26,000+

Official overview, May 2026. Institution-wide headcount.

Serviceable users / 4 weeks

208

26,000 × 80% × 1%. Planning scenario, not measured.

4-week pilot plan (~430 students)

Target user

An XJTLU student in SIP or XEC with a planned item need that existing peer channels cannot meet.

SAM (4 weeks) = N × c × d = 208 students (scenario). Pilot completions = min(80 × 10% × 25%, 4 × 2) = 2.

Alternative	Main offer / strength	Task still to check for this use case
Xianyu	Broad second-hand listings	Agree local dates and handoff with the seller
Renrenzu	Merchant equipment rental	Check stock, dates and total rental terms
ATRenew	Device trade-in and resale	A buying/selling route rather than a peer loan

XJTLU overview, May 2026. c = 80% campus presence; d = 1% unmet need in four weeks. Both rates are assumptions.

Solution & Value Proposition

Dated request and offer

Return confirmation

Prototype screens using synthetic QA accounts

01 Need and dates

Publish dates and budget. Expire old requests.

02 Relevant owner offer

Review relevant offers before accepting a booking.

03 Compatible handoff

Review personal classes or enter times manually.

04 Explicit agreement

Both parties confirm handoff. Borrowing and rental also record return.

USP hypothesis

Dated requests and private timetable matching coordinate a campus handoff.
Compare with peers: agreement time, completed handoffs and use without GPS.

Technology & Innovation

Next.js + TypeScript, transactional SQL and student-email verification

01
Local import
PDF.js and OCR
Image / PDF input

02
Human review
Classes, dates,
weeks and rooms

03
Constraint filter
Availability, calendars
and existing bookings

04
Ranked options
Up to four options
Public handoff points

05
Confirmation
Owner acceptance
Bilateral records

Implemented rule	Why it matters
14-day, 15-minute search	Bounded window for time suggestions
Teaching weeks and changes	Each user's term and exceptions
Availability and conflicts	Avoid class and booking clashes
Private timetable access	Keep full schedules private

Implemented prototype: local import and rule-based matching. Payments remain offline.

Value enabled

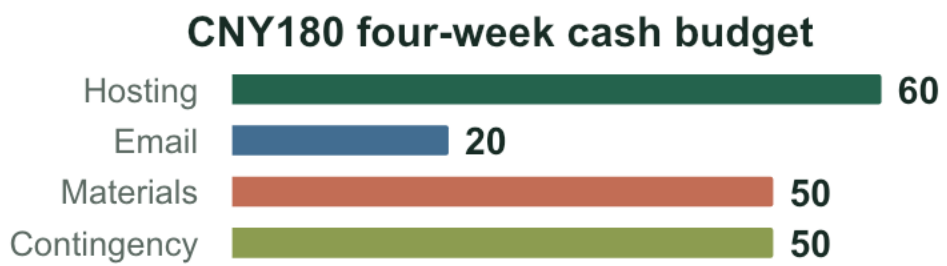

A compatible item/date and a meeting both people can review. No single timetable template for every student.

Limits

OCR can fail. Suggestions use heuristics, not predictive AI. Manual times remain available.

Business Model

Partners (proposed)	Activities	Value proposition	Relationships	Segments
Class contacts Student societies Hosting and email	Moderation Maintenance Pilot support	An item for your dates Clear fees and return Public handoff Optional location	Manual support Explicit confirmation	Student requesters Willing item owners SIP + XEC
	Resources Relevant supply Code and operators		**Channels** Eight classes first Then SIP + XEC	
Costs CNY180 cash for four weeks. Team time separate.			**Revenue** Pilot fee CNY0. Later: test a 5% fee on paid use.	

CNY20
Pilot paid GMV

CNY0
Pilot fee revenue

-CNY180
Pilot cash result

Later unit contribution: CNY0.30

50% paid × CNY20 × 5% fee - CNY0.20 variable cash cost.
At CNY100 fixed/month: 334 completions to break even.

Planning assumptions. Validate fees, repeat use and lower fixed costs before expansion. Deposits and team time are separate.

Team

Rita leads product and technical delivery, supported by named research, coordination and review roles.

Member	Capability / role	Work ownership
郭宇璇	Product and technical lead	Primary delivery: requirements, full-stack coordination, QA follow-up and final material integration
汪睿	Deputy lead and team coordination	Member handoffs and coordination. Semester 2 presentation
毛相宜	Needs synthesis and evidence review	Needs, contrary feedback and evidence IDs
黄俊杰	Participant screening and personas	XEC interview records. Screening and personas
李元龙	Usability testing and statistics	SIP interview records. Usability tests and statistics
黄禹轩	Data and evidence organisation	Data organisation, evidence index and Weekly Logs
汤鋆秋	Proofreading and version control	Detail checks and alignment of current versions

Research basis

15 qualitative summaries link user needs to product choices and constraints.

Team coordination

Rita integrates delivery. Wang Rui coordinates member handoffs.

Version control

Named owners retain code, calculations and source notes in the shared repository.
