Problem & Market Opportunity

Planned item access still needs agreed dates and a reliable handoff.

UK campus study: collection/return friction can deter borrowing.

Need or constraint	Evidence IDs	Design implication
Occasional needs	V002/005/008/015	Planned requests first
Owner commitment	V001/003/009/012	Dates + acceptance
Privacy and choice	V001/004/005/013	Optional GPS / import

Planned outreach

SIP + XEC

Both campuses.
Expansion is planned.

Initial channel

~430

Eight DTS classes.
Approximate cohort.

Initial four-week plan

Target user

An XJTLU student with a planned item need,
when known peers cannot provide a suitable item.

80 invitations × 10% posting × 25% completion = 2. Supply cap: 4 owners × 2 uses = 8.

Alternative	Main offer / strength	Task still to check for this use case
Xianyu	Broad second-hand listings	Agree local dates and handoff with the seller
Renrenzu	Merchant equipment rental	Check stock, dates and total rental terms
ATRenew	Device trade-in and resale	A buying/selling route rather than a peer loan

15 SIP/XEC summaries. UK context:Hobson & O'Byrne (2024). Wider outreach and funnel values are plans.

Solution & Value Proposition

Dated request and offer

Return confirmation

Prototype screens using synthetic QA accounts

01 Need and dates

Publish dates and budget. Expire old requests.

02 Relevant owner offer

An offer is a suggestion, not an automatic booking.

03 Compatible handoff

Review personal classes or enter times manually.

04 Explicit agreement

Both parties confirm handoff. Borrowing and rental also record return.

USP hypothesis

Private timetable matching for a planned campus handoff, with GPS optional.
Test against peers: agreement time, successful handoffs and opt-out completion.

Technology & Innovation

Next.js + TypeScript, transactional SQL and student-email verification

01
Local import
PDF.js and OCR
Image / PDF input

02
Human review
Classes, dates,
weeks and rooms

03
Constraint filter
Availability, calendars
and existing bookings

04
Ranked options
Up to four options
Public handoff points

05
Confirmation
Owner acceptance
Bilateral records

Implemented rule	Why it matters
14-day, 15-minute search	Bounded window for time suggestions
Teaching weeks and changes	Each user's term and exceptions
Availability and conflicts	Avoid class and booking clashes
Private timetable access	Keep full schedules private

Payments remain offline. No platform escrow, insurance or public-launch certification.

Value enabled

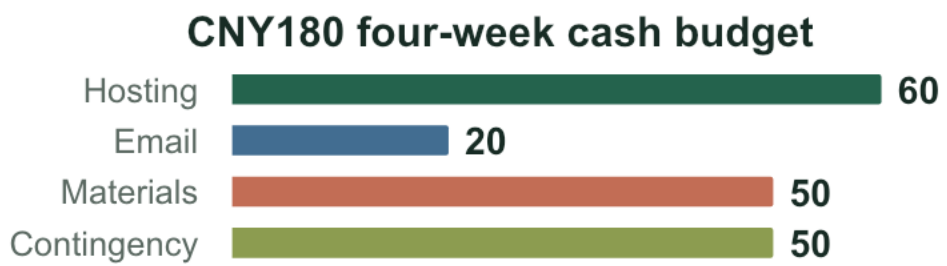

A compatible item/date and a meeting both people can review. No single timetable template for every student.

Limits

OCR can fail. Suggestions use heuristics, not predictive AI. Manual times remain available.

Business Model

Partners (proposed) Class contacts Student societies Hosting and email	**Activities** Moderation Maintenance Pilot support **Resources** Relevant supply Code and operators	**Value proposition** An item for your dates Clear fees and return Public handoff Optional location	**Relationships** Manual support Explicit confirmation **Channels** Eight classes first Then SIP + XEC	**Segments** Student requesters Willing item owners SIP + XEC
Costs CNY180 cash for four weeks. Team time separate.			**Revenue** Pilot fee CNY0. Later: test a 5% fee on paid use.	

CNY20
Pilot paid GMV

CNY0
Pilot fee revenue

-CNY180
Pilot cash result

Later unit contribution: CNY0.30

50% paid × CNY20 × 5% fee - CNY0.20 variable cash cost.
At CNY100 fixed/month: 334 completions to break even.

Planning only. Test willingness to pay and costs before expansion. Deposits and team time remain separate.

Team and Execution

Rita leads product and technical delivery. Research, analysis, testing and iteration support the work.

Member	Role / working focus	Scope of responsibility
郭宇璇	Product and technical lead	Primary delivery: requirements, full-stack coordination, QA follow-up and final material integration
汪睿	Market analysis and pitch synthesis	Market sizing, BMC, commercial logic and deck narrative
毛相宜	Interviews and requirements analysis	Interview tools, consent, needs and contrary feedback
黄俊杰	Participant screening and personas	Recruitment criteria, sample coverage and personas
李元龙	Usability testing and statistics	Task design, outcomes, denominators and regression
黄禹轩	Data and evidence organisation	Data versions, Weekly Log, sources and receipts
汤鋆秋	Iteration and quality review	Priorities, acceptance criteria and retest tracking

1 NOV / TEAM REVIEW

Confirm skills and actual outputs.
Close source-record links.

4 NOV / CONTENT FREEZE

Review model and approved AI form.
Rita approves the final deck.

5 NOV / EARLY UPLOAD

Same file: LMO + Dream Chaser.
Verify both receipts by 6 Nov.

Roles follow the agreed allocation. Rita reports the main workload. Members verify completed work against outputs.
