U Use

Campus item access

Date-aware requests.
Private timetable matching.
Explicit handoff and return.

Buy. Borrow. Rent. Swap.

U Use Team (working name)

郭宇璇 (Rita)　汪睿　毛相宜　黄俊杰　李元龙　黄禹轩　汤鋆秋

20 October 2026

Problem & Market Opportunity

Team-reported interviews: n = 15, qualitative input

Need or constraint	Evidence IDs	Design implication
Occasional needs	V002/005/008/015	Planned requests first
Owner commitment	V001/003/009/012	Dates + acceptance
Privacy and choice	V001/004/005/013	Optional GPS / import

First target customer

A DTS student with a planned item need,
without a suitable item from a known peer.

TAM context (XEC)

4,000+

May 2026 report.
Population, not demand.

Pilot SAM boundary

~430

Eight DTS classes.
Team estimate.

Four-week SOM planning case

80 × 10% posting × 25% completion = 2. Supply cap: 4 owners × 2 fulfilments = 8.

Xianyu	Renrenzu	ATRenew
Resale listings	Equipment rental	AHS trade-in / Paipai resale

All pilot stages are assumptions. Recruitment permission and actual demand remain unconfirmed. S1-S4.
Working snapshot: 20 Oct 2026. Refresh before March 2027.

Solution & Value Proposition

Dated request and offer

Return confirmation

01 Need and dates

Publish dates and budget. Expire old requests.

02 Relevant owner offer

An offer is a suggestion, not an automatic booking.

03 Compatible handoff

Review personal classes or enter times manually.

04 Explicit agreement

Owner accepts. Both parties confirm handoff and return.

Differentiation to test

Date-aware coordination with public handoff and optional disclosure.
Measure whether it helps a real local task beyond friends and existing services.

Technology & Innovation

01
Local import
PDF.js and OCR
Image / PDF input

02
Human review
Classes, dates,
weeks and rooms

03
Constraint filter
Availability, calendars
and existing bookings

04
Ranked options
Up to four options
Public handoff points

05
Confirmation
Owner acceptance
Bilateral records

Implemented rule	Why it matters
14 days, 15-minute candidates	Search a bounded, inspectable time window
Teaching weeks and exceptions	Different courses, years and personal terms
Availability and conflict checks	Avoid class, booking and return conflicts
Private timetable access	Keep full schedules private

Payments remain offline. No platform escrow, insurance or public-launch certification.

Value enabled

A compatible item/date and a meeting both people can review. No single timetable template for every student.

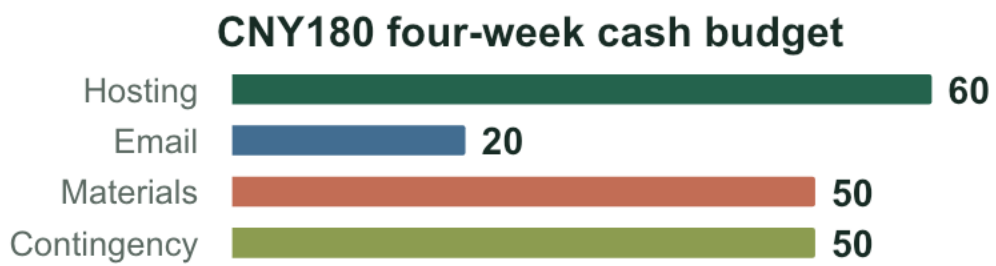

Limits

OCR can fail. Suggestions use heuristics, not predictive AI. Manual times remain available.

Working snapshot: 20 Oct 2026. Refresh before March 2027.

Business Model

Partners (proposed)	Activities	Value proposition	Relationships	Segments
Class contacts Student societies Hosting and email	Moderation Maintenance Pilot support	An item for your dates Clear fees and return Public handoff Optional location	Manual support Explicit confirmation	Occasional requesters Willing item owners DTS pilot first
	Resources Relevant supply Code and operators		**Channels** Eight DTS classes Permitted referrals	
Costs CNY180 cash for four weeks. Team time separate.			**Revenue** Pilot fee CNY0. Later fee requires validation.	

CNY20
Planned paid GMV

-CNY180
Pilot cash result

CNY0
Pilot fee revenue

CNY1
Later 5% fee, before costs

Working snapshot: 20 Oct 2026. Refresh before March 2027.

Team

Member	Responsibility / capability area	Assigned output
郭宇璇 (Rita)	Software delivery and coordination	Code, acceptance scope, release approval
汪睿	Analysis and presentation	BMC, financial model and pitch narrative
毛相宜	Interviews and requirements	Consented records and traceable insights
黄俊杰	Recruitment and personas	Sampling rationale, persona and access
李元龙	User testing and statistics	Task outcomes, denominators and checks
黄禹轩	Data handling and weekly submission	Evidence register, files and receipts
汤鋆秋	Iteration and retesting	Decision log, prioritisation and retests

W6 / 19–25 OCT

Three insights, persona and journey.
Link raw records and consent.

W7 / 26 OCT–1 NOV

Review concepts and member skills.
Confirm the six-slide argument.

W8 / 2–6 NOV

Check BMC and AI declaration.
Submit A1 through both routes.

Capability areas follow agreed roles, not verified credentials. Member backgrounds and contribution evidence need confirmation.

Working snapshot: 20 Oct 2026. Refresh before March 2027.

Progress & Roadmap

Milestone	Status as of 20 Oct 2026	Next evidence
Working request and booking flow	Implemented, scoped engineering acceptance	Real users completing their own tasks
Private timetable matching	Reviewed imports and synthetic QA exercised	Varied consented timetable formats
Demand and reliable supply	Qualitative summaries, no measured adoption	Recruitment permission, willing owners
Public operation	Not accepted for a public launch	Live email, devices, recovery and moderator

Next gates

Nov: real task observations and retests. December: evidence-led video and dual receipts. February–March: refresh financials, risk controls, impact measures and the live demonstration.

Sustainable Competitive Advantage

Current asset or proposition	What is established	What could strengthen it
Date-aware peer workflow	Working code, low copying barrier	A measured task benefit over alternatives
Campus operating knowledge	Public handoff design, proposed support	Reliable owner coverage and tested SOPs
Privacy choices	Optional map and reviewed private timetable	Observed understanding and safe operation
Brand and service reputation	Consistent U Use identity	Repeat usefulness and accountable resolution

No patent, exclusive partnership or proven network effect is claimed.

Five task dimensions: dates, mutual free time, explicit handoff/return, disclosure control, and campus support. Benchmark outcomes and cost before claiming a defensible advantage.

Risk Assessment & Controls

Risk / qualitative priority	Trigger	Control and accountable owner
Weak supply / high impact	No eligible owner or repeated no-response	Recruit dated supply; simplify to bulletin. 黄俊杰 / 汤鋆秋
Privacy / high impact	Unintended identity, timetable or location exposure	Stop exposure, investigate, minimise data. Rita
OCR or scheduling / medium-high	Reviewed class or suggestion fails a real task	Manual entry, log and retest. 李元龙 / Rita
Cash viability / high	Negative contribution or no credible break-even demand	Cap spend and test price/cost. 汪睿
Operations / high	Unresolved dispute, unavailable moderator or restore failure	Pause new trades, use escalation and backups. Rita / 汤鋆秋

Priorities are team judgments, not measured incident probabilities. Review likelihood and impact with real evidence.

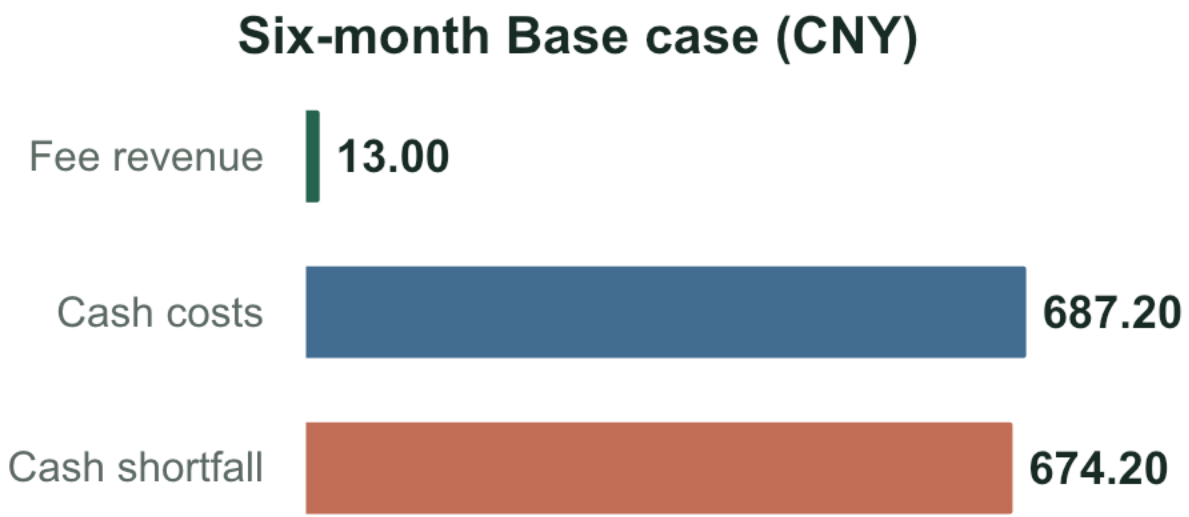

Social Impact & Measurement

Potential benefit	Measure and denominator	Evidence still needed
Useful temporary access	Genuine fulfilled requests / eligible requests	Dated records and failed attempts
Reduced purchase burden	Users who would otherwise buy / completed temporary uses	Consented counterfactual answer and total cost
Less coordination effort	Time to agreed handoff for the same task	Comparable start/end timing and failures
Safe, voluntary participation	Opt-out completion and disputes / observed tasks	Task observations and incident records

No avoided purchases or carbon savings have been measured.

Retain negative outcomes. Count requests separately from people and borrowing separately from purchases. A small pilot can test usefulness without implying campus-wide impact.

Financial Outlook & Funding

CNY900 proposed

CNY200 first release
CNY700 conditional on pilot review

Uses: 680 fixed cash, 7.20 variable cash, 212.80 reserve. No funder is committed.

38 planned completions, not 38 users. Later unit contribution CNY0.30.

Monthly cash break-even at CNY100 fixed cost requires 334 completions.
The low-usage base case does not support an equity valuation or return promise.

Next Decisions

Decision	Evidence gate	Accountability
Continue a small peer service	Useful supply, genuine completed requests and safe operation	Rita approves after team review
Test pricing or reduce cost	Observed willingness to pay and positive unit contribution	汪睿 models; 李元龙 verifies outcomes
Simplify or stop expansion	Weak supply, repeated failures or no economic case	汤鋆秋 logs the decision and retests

Final A3: 10–12 slides. Eight-minute pitch. Five-minute Q&A.

Every member attends and makes a substantive contribution.
Bring a working demonstration, tested backup recording and equipment plan.
Deck due 21 March 2027, 23:59 Beijing time. Live pitch 22–26 March.
